

Setup Instructions for Artist Guitars GS014-5 and GS014-7

On the left we have the complete box the GS014 is shipped in, on the right you can see the 5 bags of components that are included, and if you don't have all 5 bags please contact customer support – sales@artistguitars.com.au

Start by laying out your 2 feet pictured on the left, then attach one of the upright bars to the foot using the small thumb screws (with the large plastic knob) we have 2 types, this is the one with the smallest thread on it.

Repeat this for the other side.

After getting the 2 uprights attached please prepare the 2 guitar body rests (with the large foam on them) and the 4 bolts with a square locater, washer and wing nut.

This picture shows how the foam body rest connects to the foot, the foam rest has a square hole and a round hole, the screw is square so it must match up with the square hole on the foam body rest. Connect up both body rests using the 4 sets of bolts (use the widest holes)

Now we are ready to put the top neck rest on.

The longer threaded thumb bolt is for the top, the smaller thread thumb bolt is for the height adjustment

Here you have the finished stand
